SUMMARY

Frontend Engineer with **4 years of experience** building scalable, responsive, and high-performance web applications. Strong expertise in **React.js, Next.js, TypeScript, JavaScript, and modern UI frameworks** such as Ant Design and TailwindCSS. Experienced in developing real-time dashboards, data visualization systems, and enterprise web platforms across **industrial IoT environments, IT consulting, and software house**.

Confident working in **agile teams**, collaborating closely with backend engineers, QA, and designers. Possesses backend exposure using **Node.js, NestJS, Golang, MongoDB, and PostgreSQL**, enabling effective API integration and system understanding. Passionate about clean code, performance optimization, and continuous learning.

JOB EXPERIENCE

Frontend Engineer — Synopsis

Mar 2025 – Mar 2026 (Contract)

- Developed and enhanced core frontend features for a Learning Management System (LMS), supporting scalable learning workflows and role-based user access.
- Built interactive UI components and data visualizations for a Driver Monitoring System (DMS) to support real-time operational monitoring and decision-making.
- Contributed to building a **Frontend Design System** by creating reusable components and standardizing UI patterns.
- Developed and maintained a **Windows desktop application using Electron** for cross-platform deployment.
- Collaborated closely with backend, QA, product, and design teams to ensure quality delivery across multiple projects.

Key Achievements

- Contributed to the successful delivery of **multiple enterprise web applications**.
- Reduced UI development time up to 30% significantly by introducing a reusable Design System, accelerating feature delivery, and onboarding.
- Improved **UI consistency and reusability** through design system implementation.
- Expanded technical expertise in **cross-platform desktop development and scalable frontend architecture**.
- Consistently maintained **>90% sprint task completion rate** across feature development, bug fixing, and refactoring in an agile environment.

Frontend Developer — Telkom Indonesia

Feb 2023 – Mar 2025 (Contract)

Project: Evomo (Industrial IoT Platform)

- Developed real-time EMS and OEE dashboards using React and TypeScript to support industrial IoT monitoring and data visualization.
- Implemented frontend unit testing with Jest and React Testing Library to improve application

stability and reduce regression issues.

- Optimized UI performance and state management to improve responsiveness and maintainability of the dashboard.
- Collaborated closely with Backend, QA, and Design teams using agile methodology to deliver features efficiently and maintain product quality.
- Built reusable UI components with Ant Design and TailwindCSS to ensure consistent UI and faster development.
- Also contributed to multiple real-time monitoring systems, including PPE Monitoring and Vehicle Counting dashboards, integrating IoT devices, AI CCTV, and real-time data processing for operational visibility and decision-making.

Key Achievements

- Delivered real-time dashboards that improved operational visibility and decision-making for industrial monitoring
- Reduced system downtime and response delays through real-time data visualization and monitoring tools
- Improved test coverage with min 80% passed tests, improved application reliability, and reduced regression issues via automated testing implementation
- Increased development efficiency through reusable components and better state management
- Enabled centralized monitoring for PPE compliance and vehicle tracking, improving safety and operational accuracy
- Maintained >90% task completion rate per sprint while delivering features and resolving production issues

Frontend Engineer — DOT Indonesia

Jun 2022 – May 2023 (Freelance)

- Developed and maintained the **NFT Infinity web application** using Next.js and TypeScript, including feature enhancements and bug fixing for production stability.
- Implemented **Web3 integration** for wallet connection and transaction flow to support NFT functionality.
- Built a **Document Generator web application for Pertamina**, supporting file upload and document processing workflow.
- Performed **bug fixing and feature updates** on the Flip landing page to maintain UI quality and compatibility.
- Collaborated closely with **Backend Engineers and QA** to deliver and maintain multiple client projects.

Key Achievements

- Successfully delivered and maintained **multiple client-facing web applications** across different domains.
- Contributed to **stable production releases** through consistent bug fixing and feature improvements.
- Gained strong experience working in a **fast-paced multi-project environment** with cross-functional teams.

Frontend Developer — Evomo

Feb 2022 – Jan 2023 (Contract)

- Developed **landing page and device order management features**, improving usability and operational workflow.
- Integrated frontend with **backend APIs and payment flow** to enable end-to-end user transactions.
- Refactored UI components and standardized styling using **Ant Design and TailwindCSS** to improve maintainability and consistency.
- Collaborated closely with backend engineers and stakeholders to align technical delivery with product requirements.
- Assisted backend development by building REST APIs using Node.js, Express.js, and MongoDB.

Key Achievements

- Delivered **production-ready ordering and integration features**.
- Improved code quality and UI consistency through refactoring and standardization.

Frontend Developer — Kawan Kerja

Feb 2022 – Apr 2022 (Intern)

- Developed a **company profile website** using React.js, TypeScript, and Styled-Components.
- Improved understanding of **component-based architecture, API integration, and clean UI structure**.

Key Achievement

- Successfully developed a **company profile website** as part of the internship project.

Frontend Engineer — Endorsaja

Nov 2021 – Jan 2022 (Intern)

- Assisted in developing and maintaining web application features using React.js.
- Collaborated with the Backend team to integrate the Frontend with **REST APIs**.
- Performed UI improvements and bug fixing to support production stability.
- Built a **web admin back office interface** for internal operational use.

Key Achievement

- Contributed to feature delivery and UI stability improvements during the internship period.
- Successfully delivered the **internal admin dashboard** as part of the internship project.

EDUCATION

Electrical Engineering, State University of Makassar
Bachelor's Degree

2015 - 2020

SKILLS

Programming Languages: TypeScript, JavaScript

Frontend Frameworks & Libraries: React.js, Next.js, Electron

Styling & UI: HTML5, CSS3, TailwindCSS, Ant Design, Styled-Components

State Management & Data Fetching: Redux, Zustand, React Query

API & Real-Time Communication: REST API, WebSocket

Testing: Jest, React Testing Library, Unit Testing

Data Visualization: ECharts, ApexCharts

Backend Technologies: Node.js, NestJS, Express.js, Golang (Basic)

Databases: PostgreSQL, MongoDB

DevOps & Tools: Docker, Git

Development Practices: Agile Methodology, Component-Based Architecture, Reusable Components, Performance Optimization
